XhoI: Plants were grown in an aeroponic chamber for 14
days on nitrogen-rich medium followed by 3 days on N-free
medium. RNA was extracted from root tips (1-3 cm). CDNA
was prepared from polyA+ enriched RNA. The CDNA was
directionally ligated into Uni-zapxR vector from
Stratagene and packaged using Giapaex Gold packaging
extracts. Plasmids containing CDNA inserts were
mass-excised from phage stocks using Exhasit helper phage
and propagated in SOLR cells. Clone ordering and
sequencing was performed by the Centre National de
Sequencage (Genoscope, Evry, France)."

/dev_stage="harvested after 3 days of N-starvation"
/note="Vector: pBluescript pSK: Site_1: EcoRI; Site_2:
Xhoi; plants were grown in an aeroponic chamber for 14
days on nitrogen rich medium followed by 3 days on N-free
medium. RNA was extracted from root tips (1-3 cm). cDNA
was prepared from polyA+ enriched RNA. The CDNA was
directionally lighted into Uni-zapKR vector from
Stratagene and packaged using Gigapack Gold packaging
extracts. Plasmids containing cDNA inserts were
mass-excised from page stocks using ExAssit helper phage
and propagated in SOLR cells. Clone ordering and
sequencing was performed by the Centre National de
Sequencage (Genoscope, Evry, France)."

/dev_stage="harvested after 1 bsk; Site_1: EcoRI; Site_2:
XhoI; Plants were grown in an aeroponic chamber for 14
days on nitrogen-rich medium followed by 3 days on N-free
medium. RNA was extracted from root tips (1-3 cm). cDNA
was prepared from polyA+ enriched RNA. The cDNA was
directionally ligated into Uni-zapXR vector from
Stratagene and packaged using Gigapack Gold packaging
extracts. Plasmids containing cDNA inserts were
mass-excised from phage stocks using ExAssit helper phage
and propagated in SOLR cells. Clone ordering and
sequencing was performed by the Centre National de
Sequencage (Genoscope, Evry, France)."

in liquid nitrogen. Pod walls were pooled for mRNA extraction. CDNA was prepared from polyA+ enriched RNA. The CDNA was directionally ligated into the Unisap XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-Zap phage using Ex-assist helper phage and propogated in XLOLR cells."

/dev_stage="Roots harvested at 10, 17, 22, 31 and 38 days
post-incculation with Glomus versiforme. The library was
made from a mixture of RNA from each of these stages."
/lab_host-"E. coll strain XLOLR"
/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
Xho1; cDNA was prepared from polyA+enriched RNA from
roots harvested at 10, 17, 22, 31 and 38 days
post-inoculation with Glomus versiforme. The cDNA was
directionally ligated into the Unizap XR vector from
Stratagene and packaged using Glapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

/lab_host="E. coli strain XLOLR"

/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
Xhoi; cDNA was prepared from polyA+ enriched RNA from
roots harvested at 10, 17, 22, 31 and 38 days
directioncally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

/note="Vector: pBluescript SR: site_!: ECORI; Site_2:
Xhot: CDNA was prepared from poly+ enriched RNA from
roots harvested at 10, 17, 22, 31 and 38 days
post-incollation with Glomus versiforme. The CDNA was
directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing CDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

/note="Vector: pBK-CWY, Site_1: EcoRI; Site_2: XhoI; This cond. library was constructed from polyA+ enriched mRNA from green seed coats in mid to late developemental stage, average fresh weight 250 map per seed. Traces of pod and embryo tissue also present. Complementary DNA was synthesized from mRNA using an XhoI-poly(dT)
linker-primer. EcoRI adopters were ligated to the blunt-ended cDNA fragments and the products were digested with XhoI for directional cloning into lambda ZAP Express vector. This lambda library was amphilited once using E. coli host strain XLI Blue MRF'. Inserts were then subcloned by mass excision using Exassist helper phage for conversion into phagemid vector pBK-CWV in E. coli host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Shoemaker, R. XhOI; The CDNA library was constructed from mRNA isolated
from degenerating cotyledons of 9-10 day old etholated
seedlings for the cultivar Williams. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with a XhoI restriction site. EcoRI
adapters were ligated to the blunt-ended cDNA fragments
followed by XhoI digestion. The cDNA fragments were
directionally cloned into the EcoRI-XhoI restriction site
of the pBluescript vector. The ligated cDNA fragments
were transformed into DHIOB host cells (GibcoBR). This
library was constructed in the laboratory of Dr. Randy

```
With Phytophthora medicaginis."

/dev_stage="roots harvested at 10 days post inoculation with Phytophthora medicaginis."

/dab_nost="E. coli strain XLOLR"

/dot="Vector: paluescript SK-; Site_1: EcoRI; Site_2:
XhoI; cDNA was prepared from polyA+ enriched RNA from roots harvested at 10 days post inoculation with Phytophthora medicaginis. The cDNA was directionally ligated into the Uni-ZAP XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in XLOLR cells. Note: EST may be of fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Email: bening@msu.edu

/note="Vector: pBluescript pSK; Site_1: EcoRI; Site_2:
XhoI; Plants were grown in an aeroponic chamber for 14
days on nitrogen-rich medium followed by 3 days on N-free
medium. RNA was extracted from root tips (1-3 cm). CDNA
was prepared from polyA+ enriched RNA. The cDNA was
directionally ligated into Uni-zapxR vector from
Stratagene and packaged using Giapack Gold packaging
extracts. Plasmids containing cDNA inserts were
mass-excised from phage stocks using ExAssit helper phage
and propagated in SOLR cells. Clone ordering and
sequencing was performed by the Centre National de
Sequencage (Genoscope, Evry, France)."
